T 3']; double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/T3 vector. Library went through one round of normalization, and was constructed by Bento Soares and M.Fatima Bonaldo."

```
T 3'], on equal amounts of mRNA from 2 13.56pc and 2
14.56pc embryos [total RNA provided by Minoru Ko, Wayne
State Oniv., from 2 ]; double-stranded cDNA was ligated to
BCO RI adaptors (Pharmacia), digested with Not I and
cloned into the Not I and Eco RI sites of the modified
pT7T3 vector. Library went through one round of
normalization, and was constructed by Bento Soares and
M.Fatina Bonaldo. "

The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. cDNA Library Preparation: M.B. Soares Lab Clone distribution: NCI-CGAP Clone distribution information can be found through the I.M.A.G.E. Consortium/Lin. at:
www-bio.llnl.gov/bbrp/image/image.html The following repetitive elements were found in this cDNA sequence: 102-157,
                                                                                                                                                                                                                                                                                                                                 /clone_lib="NCI_CGAP_Sub3"

                                                                                              FEATURES
                                                                     With a modified polylinker; Plasmid DNA from the normalized library NOT_CGAP_PR22 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool 5,000 clones made from the same library (cloneIDs 985608-986759, 1101192-1101959, and 1217928-1220615). Subtraction by Bento Soares and M. The CDNA libraries ICRFP 522 and 523 were normalized with
oligonuclectide fingerprinting, resulting in a unique subset of
5376 cDNA clones.

Another Torgan: pooled: Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from five normalized polylinker; steel: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from five normalized.

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was extractive hybridization reaction. The driver was FCR-amplified cDNAs from pools of 5,000 clones made from the same 5 libraries. The pools consisted of the following libraries and cloneIDs: Soares NDHSF pool 1:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

/note="Vector: pr773D-pac (Pharmacia) with a modified polylinker: 1st strand cDNA was prepared from 3 pooled germ cell tumors, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT773 vector. Library is normalized. Library was constructed by Bento Scares and M. Fatima Bonaldo. "

                                      /note="Organ: denis_drash; Vector: pucl8; Site_1: Smal; Site_2: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.
